

Dream Gadgets — Scope of Delivery

Prepared For: Dream Gadgets Document Type: Client Deliverable Overview Classification: Confidential

What We Are Building

A complete, end-to-end mobile store management platform for Dream Gadgets. The system covers everything from purchasing a device, managing stock across branches, billing customers at the counter, to selling phones online — all in one unified platform.

The platform consists of three parts:

1. **Internal Management System** — for your staff and operations
 2. **Public Online Store** — for customers to browse and buy online
 3. **Admin Control Panel** — for owners to manage everything
-

Part 1 — Internal Management System

This is the backbone of your daily operations. Every staff member uses this based on their role.

Purchase Entry

When you buy a phone — from a vendor or a customer — you record it here. Every device gets its own entry with full details.

What gets recorded:

- IMEI number (unique, no duplicates allowed)
- Brand, Model, Colour, Storage
- Box type (with box or without box)
- Battery health percentage
- Condition (Sealed Pack, Open Box, Super Mint, Mint, Good)
- PKU Code
- Country of origin
- HSN Code for GST
- Purchase price, wholesale price, sale price
- Tax rate (GST / IGST)
- Multiple photos of the device
- Accessories included (charger, earphones, case)
- Warranty details

- Vendor details
- Birthday offer flag

Once saved, the item automatically appears in your inventory.

Inventory Management

A complete view of every device you own across all branches.

What you can do:

- View all items with filters (brand, model, condition, status, price range)
 - See which items are available, sold, booked, transferred, or returned
 - Toggle any item on or off the online website
 - Set a separate online price different from the in-store price
 - Upload or replace photos for any item
 - Print condition labels and IMEI barcode stickers
 - View the full history of any device — from purchase to sale to return
 - Mark items as inactive or scrapped
-

POS Billing (Point of Sale)

The billing counter. Fast, flexible, and GST-compliant.

How it works:

- Search for any item by IMEI, model name, or brand
- Add one or multiple items to a single bill
- Select or quickly add a customer
- Apply discounts (flat or percentage)
- Split payment across multiple methods in one transaction:
 - Cash
 - Card
 - Online (UPI / NEFT / IMPS)
 - Exchange (trade-in value)
 - Advance (pre-collected deposit)
 - Bajaj EMI
- GST is calculated automatically (CGST + SGST or IGST based on state)

- Generate invoice instantly:
 - Full A4 GST Invoice (PDF)
 - Thermal receipt for 80mm printer
 - Email invoice to customer
 - Share invoice on WhatsApp
 - Hold a bill and come back to it later
 - Void or cancel a sale with manager approval
 - Reprint any past invoice
 - Book an item with advance payment and complete the sale later
 - Daily cash reconciliation summary
-

Client Management

A complete profile for every customer you deal with.

What is stored:

- Full name, phone numbers, email
- Address, city, state, pincode
- Date of birth (for birthday offers)
- ID proof (Aadhaar, PAN, Voter ID, Passport)
- EKYC verification status
- Customer type (Walk-in, Online, Corporate, Dealer)
- Notes and tags

From a client's profile you can:

- See their full purchase and sales history
 - View all their past invoices and reprint any of them
 - See exchange and return history
 - Check outstanding advance or booking amounts
 - Initiate a return directly from their sale history
 - Send them an email or WhatsApp message
 - Automatically flag birthday offers
-

Stock Transfer

Move devices between your branches with a full paper trail.

How it works:

- Create a transfer request by selecting items (by IMEI or batch)
 - Assign source branch and destination branch
 - Add a transfer note or reason
 - The receiving branch confirms each item individually
 - Partial receipts are supported
 - Items can be rejected with a reason (damage, mismatch)
 - Full transfer history is maintained
 - Print a transfer manifest for physical records
 - Pending transfers show as alerts on the dashboard
-

Exchange Module

Accept a customer's old device as part payment for a new one.

How it works:

1. Customer brings their device
 2. Staff records device details (brand, model, IMEI, condition, battery health, photos)
 3. A condition checklist is completed (screen, body, battery, buttons, camera)
 4. An exchange price is offered (manual or system-suggested)
 5. Customer accepts — the exchange value is deducted from the new sale
 6. The exchanged device is automatically added to your inventory as a refurbished purchase
 7. EKYC is required for high-value exchanges
-

Sales Return

Process a return when a customer brings back a sold item.

How it works:

- Search by IMEI or invoice number
- View the original sale
- Select which items to return (partial returns supported)
- Record the reason (defective, wrong item, customer changed mind)
- Check the condition of the returned item

- Choose refund method (original payment method, store credit, or cash)
 - Inventory is automatically updated
 - A return invoice / credit note is generated
 - Return window is configurable (default 7 days)
 - Returns above a set value require manager approval
-

Purchase Return

Return a purchased device back to the vendor.

How it works:

- Search by IMEI or vendor invoice
 - Select items to return
 - Record the reason (defective, wrong model, overstock)
 - Inventory is updated automatically
 - A purchase return note is generated
-

Dashboard

A real-time overview of your entire business — visible to owners and managers.

What you see at a glance:

- Today's total sales (count and value)
- Today's total purchases (count and value)
- Net income for the day
- Active stock count and total value
- Booked items (count and value)
- Pending returns
- New customers added today
- Online orders status (pending / shipped)

Charts and trends:

- Sales trend over 7, 30, or 90 days
- Purchase vs sales comparison
- Top selling brands and models
- Payment method breakdown

- Stock aging distribution
- Branch-wise performance comparison
- Employee sales leaderboard
- GST liability summary

All charts can be filtered by date range, branch, and employee.

Reports & Exports

Every report you need for operations, accounts, and GST filing.

Reports available:

- Daily Sales Summary
- Weekly Sales Report
- Monthly Sales Report
- Purchase Report
- GST Report (GSTR-1 format)
- Stock Aging Report
- Customer Report
- Employee Sales Report
- Exchange Report
- Return Report
- Inventory Valuation Report
- Branch-wise Profit & Loss

All reports can be exported as Excel or PDF. Reports can also be scheduled to arrive in your email automatically (daily / weekly).

Part 2 — Public Online Store

A fully functional e-commerce website where customers can browse your certified used phones and place orders online.

Website Pages

- Homepage with banner sliders, featured phones, latest arrivals, and flash sale timers
- Product listing page with filters (brand, model, price, condition, storage, colour)

- Product detail page showing:
 - Multiple photos
 - Condition report
 - Battery health
 - Box type
 - Warranty details
 - Price with EMI options
 - IMEI (partially masked for privacy)
 - Special offer labels
 - Certified Used Phones section with quality badge
 - City / Store wise stock display (customers can see which branch has the phone)
 - Similar product suggestions
 - Flash sale section with countdown timer
 - EMI calculator (interactive, with Bajaj and bank options)
 - WhatsApp chat button (floating, with pre-filled message)
 - Cart and checkout
 - Online payment via Razorpay (UPI, Card, Net Banking, EMI)
 - Order confirmation page with WhatsApp notification
 - My Account section (order history, profile, saved addresses, wishlist)
 - About Us, Contact, and Policy pages (managed by admin)
-

Customer Account

Customers can register and log in to:

- Track their orders
 - View order history
 - Manage their delivery addresses
 - Save items to wishlist
-

Part 3 — Admin Control Panel

The owner and manager's control centre for managing the entire platform.

What Can Be Managed

- All modules (purchases, sales, inventory, clients, transfers, exchanges, orders, returns, reports)
- User accounts and roles — create, edit, deactivate staff
- Role permissions — control exactly what each role can see and do
- Branch management — add and manage store locations
- Brands and models master list — add new brands and models
- Tax settings — configure GST rates per HSN code
- Invoice settings — customise invoice prefix, numbering format
- Notification settings — configure email and WhatsApp alerts
- Homepage banners — upload and manage website banners
- Offer management — create discount campaigns
- Website pages — edit About, Contact, and Policy pages
- SEO settings — manage page titles, descriptions, and metadata

Staff Roles & Access

The system supports 6 built-in roles plus the ability to create custom roles.

Role	What They Can Do
Shop Owner	Full access across all branches
Store Manager	Full access within their assigned branch
Shop Sales	Billing, inventory view, client lookup
Store Sales	Same as Shop Sales
Calling Staff	Client management and order updates only — no billing
Employee	Limited access, configured by owner
Custom Role	Any combination of permissions, built by the owner

Each role can be configured with specific permissions per module: View, Create, Edit, Delete, Export, Approve.

Notifications & Communication

The system sends automatic notifications to customers and staff via:

- WhatsApp — order updates, invoice sharing, booking confirmations
 - Email — invoices, order confirmations, reports, password resets
 - In-app alerts — stock updates, pending transfers, low stock warnings
-

Key Highlights

- Every device is tracked by its unique IMEI — no duplicates, full history from purchase to sale
 - IMEI can be scanned using a barcode or QR scanner
 - GST-compliant invoicing for all transactions
 - Multiple payment methods can be split in a single bill
 - Online store inventory is directly linked to your internal stock — no double entry
 - Multi-branch ready from day one
 - Works on desktop, tablet, and mobile (PWA)
 - All data is securely stored and backed up
-

This document covers the complete scope of what is being built for Dream Gadgets. Any features outside this scope will be treated as a change request.
